

1 Full pic of unit

The whole cabinet, where it stands.

2 Serial plate

Close enough to *read*. Of *this* machine.

3 Bottom of unit

Underneath — condenser and floor.

Three photos on *every* unit, taken with the app's camera buttons while you stand there. Tapping one gives you **Take photo** or **Choose from phone** — only choose from the phone for a shot of *this* unit on this visit. The app won't let you submit without all three, and it names the one that's missing.

THE STOP

1. **My Route** → each store is a card, every cooler listed on it with **model + serial**. Match the card to the machine first.
2. **Tap the unit** to open its PM. Check the serial on screen against the plate.
3. **Do the work, then fill the form**. Nothing is pre-filled — temp, set point and voltage are blank because they're readings.
4. **Three photos**.
5. **Store signature**, or tick **No store contact available**. Never sign their box.
6. **Submit** → you land back on the store card, next cooler right there.

YOUR PHONE

- After you submit, tap **Save to my phone** → **Save Image**. Photos taken with the app's camera button do *not* reach your camera roll on their own — that panel is the only way.
- **Keep them ~1 month**. If a report is ever questioned, your copy settles it. Don't clear the camera roll after a route.
- **No camera setting to change**. The app shrinks each photo itself (a few MB → about 100 KB) so a route uploads on bad store signal — but the copy it saves to your phone is the full-size original.
- Photo won't upload? **Don't delete it**. Finish the stop, then tell the office the store and unit.
- Lost signal? Finish the form — it's held on the phone. Submit outside. Don't start over.

WHAT IF...

Store is closed / gone	Store card, bottom: Store closed . Photo of the front + what you saw. Covers <i>all</i> units there at once.
Store open, one machine isn't there	Open that unit → MISSING ASSET on its card. Photo of where it should be.
A cooler that's not on my list	Store card → + Add an asset , then do the full PM on it.
Can't find or read the serial plate	Tick NO SERIAL NUMBER above the photo buttons. Plate shot becomes Inside of cooler — still three. Reports itself to the office.
...and it's not on my list either	Add it with the same NO SERIAL NUMBER box ticked.
Unit broken / leaking / unsafe	Fill in what you can, write it in comments, then REPORT ISSUE .
Anything else worth saying	Write it in Comments . Anything you write there goes to the office as a reported issue — so say it, but leave it blank on a normal visit.
Extra cooler here, not on the list	Don't just write it in comments — a note doesn't create a record. Store card → Add an asset , then do the full PM on it. Nine of these sat in comments for two months and none of them got a record.
The form is blue	Secondary visit audit — being re-documented. Do it properly, fresh photos, nothing carries over. Paid your normal rate.
Nobody to sign	Tick No store contact available . Never sign for the store.
No meter for voltage	Tick No meter on hand . Prints <i>not measured</i> . A stated gap is fine, a made-up number isn't.
Need to fix a report I sent	Tap the finished unit on the store card — it reopens. Change is timestamped.
"Photo already used on another report"	The guard is right. Take a new photo of <i>this</i> machine. Never use the gallery.
Someone else already did it	PM PREV COMP at the bottom of the form.

The one rule behind all of it: the report has to prove what you did without you being in the room — a photo of the machine you actually touched, a reading you actually took, and a plain sentence when something wasn't possible. **"I couldn't do it and here's why" always beats a form that looks complete.** This all changed because a customer found the same photo on several reports, forms filled in for closed stores, and units with no picture of their own plate. It cost us the invoice.
